CALL FOR EXPRESSION OF INTEREST FOR NOOR PV I

*Launch of Solar PV Projects of NOOR,
The Multi-technology Moroccan Solar Plan.*

Morocco, through NOOR, held by Masen, aims at developing multi-technology solar power plants of a minimum total capacity of 2000 MW by 2020, which would represent 14% of the total installed capacity. These projects will be using a technology mix that will best meet Morocco's needs.

Following the successful launch of the three first CSP power plants within NOOR Ouarzazate Solar Complex, Masen starts the process for the development of new solar power plants using photovoltaic technologies. The NOOR PV I phase will include the development of the NOORo IV power plant (between 50 and 70 MW capacity), located in Ouarzazate. It might also include the projects of NOOR Laayoune and NOOR Boujdour, for a capacity around 50MW each.

The NOOR PV I projects are expected to be developed under an IPP (Independent Power Production) scheme, through an international Request for Proposals, for the design, financing, construction, operation and maintenance of these projects.

All interested parties are hereby invited to express their interest within the requirements listed in the Call For Expression of Interest available on: <https://masen.local-trust.com/>.

The submission deadline of NOOR PV I EoI is April 6, 2015 at 9:00 am Moroccan time.
